

The model we used is chatgpt-4o

- what are some advantages and disadvantages of KNN
- compare the use case for matrix factorization and neural network
- explain how als works
- what are some disadvantage of SVD
- in what cases ensemble works worse than base model
- what are the advantage and disadvantage of bootstrapping
- what problems can weighted knn solve
- what can be improved by adding an additional parameter to item response theory
- is it possible to apply weights to matrix factorization
- what are some popular regularization
